Profile Summary

Computer Science and Technology undergraduate with strong foundation in software engineering principles and practical experience in full-stack development. Skilled in JavaScript, Java, Python, and modern frameworks with demonstrated ability to deliver complete software solutions. Analytical problem-solver experienced in Agile methodologies, database design, and collaborative development. Committed to technical excellence and continuous learning in software development.

Education

Uva Wellassa University	2022 – Present
B.Sc. (Hons.) in Computer Science and Technology (Reading)	
Mayurapada Central College Narammala	2018
G.C.E. Advanced Level – 2019	

Projects

[1] Meteorologically-Informed LSTM System for Dengue Forecasting in Sri Lanka

Final Year Research project (reading)

Python, TensorFlow, Machine Learning, Time-Series Analysis, Software Systems

Built an LSTM-based predictive system that integrates meteorological and epidemiological data for weekly dengue forecasting, including feature preprocessing, feature engineering, and cloud deployment for real-time visualization.

[2] Kumana WildTrails: Safari Experience and Booking Platform

University Project

Vite, Spring Boot, PostgreSQL, Firebase, Tailwind CSS, Google Maps API, Object-Relational Mapping, GPS

A web-based system featuring wildlife sighting reports, safari booking and management, payment integration, driver management, and data-driven safari planning, implemented using Agile development methodology.

github.com/Lahirulakshan129/Wild-Trails

[3] FlixFinder: Movie Discovery Android Application

University Project

Kotlin, Android Studio, TMDb API, Troubleshooting

Feature-rich Android app with TMDb API integration, genre categorization, rating display, and YouTube trailer links for enhanced user experience.

github.com/Lahirulakshan129/Flix-finder

[4] Vigenere Cipher Simulation Software

University Project

Java, JavaFX, Problem-Solving

Desktop application simulating Vigenere cipher encryption and decryption with interactive GUI and implementation of classical cryptographic algorithms. github.com/Lahirulakshan129/vigenere-cipher

[5] Inventory Management System -InventoryPro

Mini Project

PHP, MySQL, Bootstrap 5, Software Systems

PHP-based system with store management capabilities including product tracking, stock management, and reporting features.

github.com/Lahirulakshan129/InventoryPro

Technical Skills

Programming Languages:	Java, JavaScript, Python, Kotlin, PHP
Frameworks & Libraries:	React (Vite), Spring Boot, Tailwind CSS, TensorFlow, Bootstrap, Object-Relational Mapping
Databases:	PostgreSQL, Firebase Realtime Database, MySQL
Development Methodologies:	Agile Development, RESTful APIs, OOP, Git and GitHub
Other Skills:	Machine Learning, Software Systems, Troubleshooting, Problem-Solving

Interpersonal Skills

- Leadership and Team Collaboration
- Effective Communication
- Problem-Solving and Analytical Thinking
- Decision Making
- Adaptability and Willingness to Learn
- Ability to Work Under Pressure
- Troubleshooting and Technical Reasoning

Certifications

AI/ML Engineer - Stage 1

Centre for Open and Distance Education, Faculty of Computing, SLIIT

code.sliit.org/certificates/3b0m73u068

Cloud Computing Fundamentals

IBM SkillsBuild | Issued: November 13, 2025
